

Translon Symposium 2026

Translated regions of RNA: from ribosomes to proteome diversity

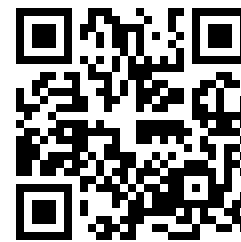

June 17 29–30 June 2026

University of Oslo, IBV

A two-day meeting on translated regions of RNA - their regulation, architecture, ribosome-associated activities, products, detection, annotation, technologies, and representation in biological resources.

- **Free registration,**
- Monday 29 - Tuesday 30 June 2026
- Nucleus, Bikuben, Kristine Bonnevis hus
- For RNA biology, translation, proteomics, and related fields

Register
translonsymposium.org

Selected speakers

Pavel Baranov University College Cork, Cork, Ireland	Enigmatic Translons - Animalcules of Molecular Biology?
Jon Mudge Institute of Cancer Research, London, UK	Peptideins and the hidden coding landscape of the 5' UTR
Tomasz Włodarski Institute of Biochemistry and Biophysics, Warsaw, Poland	Co-translational protein folding in the light of ribosome evolution
Beáta Grallert Oslo University Hospital, Oslo, Norway	From Stress Responses to Translation Regulation: Notes from the Outskirts
Joanna Kufel Warsaw University, Warsaw, Poland	Non-Canonical translation events in the yeast <i>Saccharomyces cerevisiae</i>

Programme themes

Regulation & Architecture: translational architecture, upstream and overlapping translons, regulatory RNA features, recoding
Ribosome & Outputs: nascent-chain, pausing, stalling, elongation, termination, proteoforms, microproteins
Annotation & Resources: reference annotation, databases, infrastructure, computational prediction and community resources
